

# Forex HYBRID TRADER

## Manual & Auto

By EliteIT4U Team

## User's Manual

<http://www.hybtrader.com>

### Important note #1: Active signals

Signals are good when they are often and when they are not false. Some systems may be visually wonderful, but if you zoom in, there is almost no trading opportunity.

We worked a lot to find golden middle between activity and quality. And finally, we did it... Signals change quite often while drawdown is pretty small (except news bars).

FX Hybrid offers trading opportunities at any time, at any timeframe. It is not a scalping style, but it is a reliable and multiple algorithm that is available in manual or auto style.

### Important note #2: Win/Loss statistics

FX Hybrid Trader manual part offers signals that you may follow in simple manual mode, or activate semi-auto trading. Quality of signals can be checked within recent history based on top profits and drawdowns and frequency. We have gathered our trading information in a summary to give you a clear view of its accuracy. EURUSD, M15 is one of the top requested combination, so here is a record for it.

Please, take a look on the graph above. It covers 3 months of trading and shows average win/loss of about 70-80%. Even though there are some bad weeks, overall accuracy is still great! Statistics is based on real trading by our testers.

# ALL FOREX PAIRS & M15-M30-H1-H4 TIME FRAMES

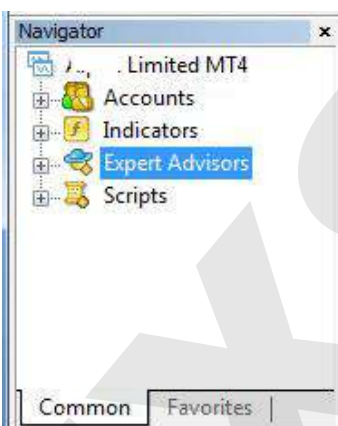

## Installation and Setup. MetaTrader 4 Client Terminal

"You should save your Indicator in the specific folder location, which is: "MT4 > File > OpenDataFolder > MQL4 > **Experts**"

**LETMEHELPOUTOFINDTHISNEWFOLDER:**

Start MetaTrader4. Select File in the menu, **OpenDataFolder**.

You will be in a special MT4 folder: its name may vary depending on your broker. But that's the folders you will see:

Open MQL4 folder – check the picture in the middle. Here you will find **Experts** folder: Copy and paste Indicator inside **Experts** folder.

**Now RESTART MetaTrader4.**  
**The files will appear under Navigator list.**

The Navigator panel displays all the accounts, indicators, expert advisors and scripts available to you. If you followed the simple instruction above, you should see H-Trader in Experts.

If you don't see it there, please make sure you have placed the file in the correct folder, as described above. Relaunch MetaTrader4 and check it once again.

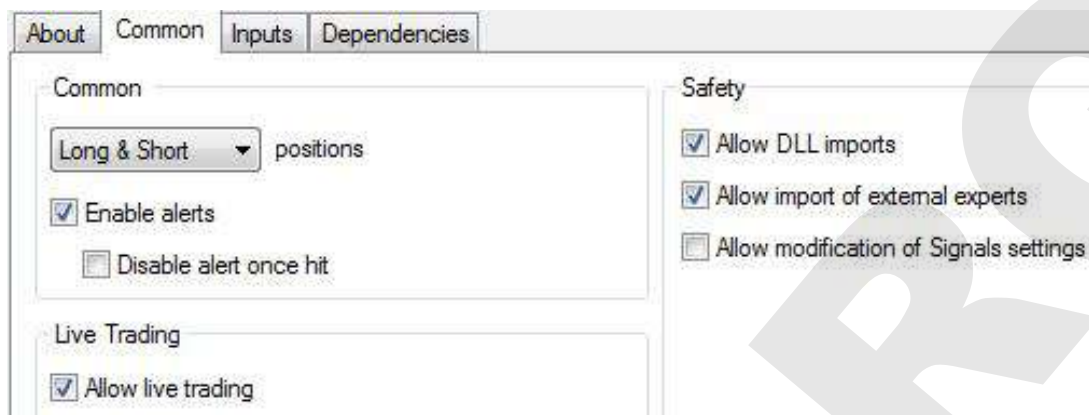

If it is still not listed there, contact our technical support by sending an email to: [denmurakami@gmail.com](mailto:denmurakami@gmail.com)

**VIDEOGUIDE:** <https://www.youtube.com/watch?v=ScSj-RLp6Mw>

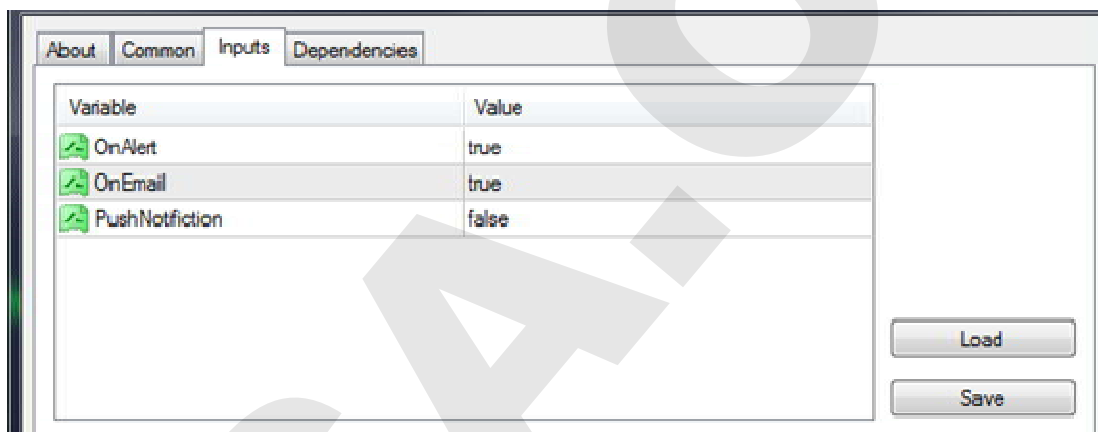

Open ANY chart M15-M30-H1-H4 and drag Indicator there.

A window with the settings appears. Open Common settings and enable Live Trading and DLL imports. It is required for Auto Trade option. Please, make all the settings in the “Common” tab the same as below.

Then switch to **Inputs** settings. These are variable parameters

- ✓ OnAlert: sound alert, main & simple
- ✓ OnEmail: get emails with signals
- ✓ OnPush: get push notifications on your phone

**Click OK. ALL OTHER OPTIONS ARE ACTIVATED PANEL**

After you install it, you will need to get KEY from me. Check the PC CODE that appears after the installation and send it to me directly to

**denmurakami@gmail.com**

I will generate you a key. When you get the key, insert this key into PC CODE field and press enter. Yes, right on the chart: enter the key, double click and press Enter.

**Click OK and then indicator will start work and show all details!**

**Important note: you can hide each panel in one click. EASY. This help you to have all options at one panel, but still save your chart's space.**

**Save your chart from useless information. EASY!!!**

**Let's focus on each panel.**

## **PART 1. Indicator with its options**

**1. AutoTrade:** this option is quite popular among traders. If you activate it, H-Trader will trade its next 1-2-3 or even ALL signals. It will place it and modify according with the preset SL and TP. If you set Breakeven in BE Pips section, it will also use it. You can chose only one next signals or both. But a little bit later about these features.

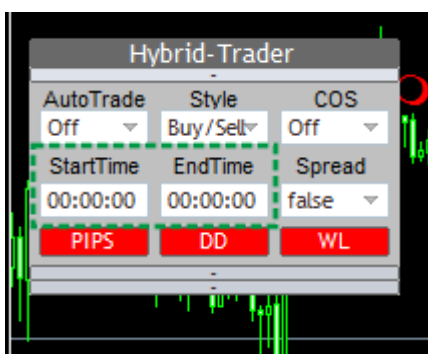

**2. Style:** chose what kind of signals you would like to take by using AutoTrade option. You can take just Buy's or Sell's and sure, Buy & Sell. This helps to avoid losses on strong UP/DOWN trends. You can make your trading even safer.

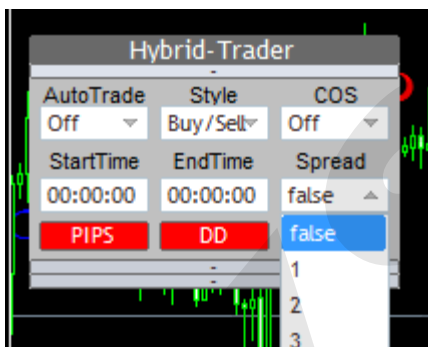

**3. COS:** close on opposite signal option. This option is popular, because allow to close orders as soon as new signal comes. You can chose what kind of orders to close on opposite signal:

- \* off: deactivated option
- \* both: all(profit/loss) order will be closed on opposite signal.
- \* Profit: COS will close current order on opposite signal just if it's in profit
- \* Loss: COS will close current order on opposite signal just if it's in loss

**4. Time:** you can set start time and end time for each pair/TF you trade by using H-Trader. It's easy, use your terminal time (see it in Market Watch MT4).

**5. Spread:** you can set high spread limit. For example, if you chose 3, than AutoTrade won't be able to make an order on next signal if spread is higher than 3. You may consider it as spread filter.

**6. Pips, DD, WL:** this is good option that shows real situation on the Market. As soon as you activate it - you will see win/loss ratio for latest 30 signals. It based on Pips info data. Order counts as win if order comes into +10 Pips. Sure, there is not an ideal way to count... but we offer this one, because it's common. If you need any own way to check it - we can help you with deep analytics. Also, note, that it's impossible to take peak profit, it's just peak and based on maximum fluctuation. DD: by clicking on DD button you will see Drawdown of each signal.

\*Indicator calculates signals based on price quotes. They are different on different brokers. Pips may be a bit different or some range of signals can be different. If you have big difference - please, upload bars history in MT4 data center. It's free, or contact us directly. Indicator shows maximum possible peak profit. It's impossible to take all. This is good index of signal's quality. Order counts as profitable with at least 10 Pips.

## PART 2. Smart options:

**1. Pair:** you can add any other pair on current chart. The list of pairs come from Market Watch MT4. If you want to compare pairs on same chart - this is the best way... want to find correlation between pairs - easy.

**2. Time Frame:** as soon as you add extra pair on current chart, you are able to chose TF of that pair too. Also, you can add same pair and chose higher TF. Then you will be able to see visually upcoming trend right on the chart. EASY.

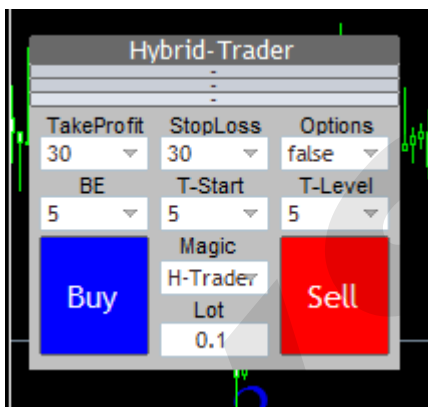

**3. Classic:** you can add 3 classic indicators on the chart: Stochastic (STH), RSI, EMA. They have common settings and show up (blue)/down (red) or grey (middle).

You can see trend direction by classic tools on M15 to H4 time frames. This will help you in decisions too. Also, by personal request we will issue a version where you will be able to set own settings for each classic indicator.

**4. Scripts buttons:** by using these 3 buttons you will be able to close orders on current pair by one click. You can close all or profit/loss orders. Easy.

### PART 3. Trading options:

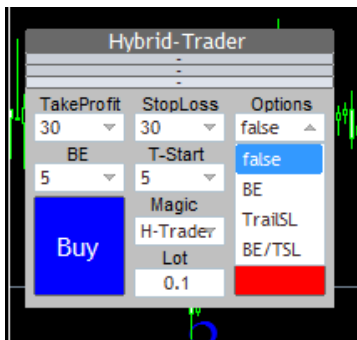

**1. Buy/Sell:** You may open Buy or Sell order by clicking this button. When you click it, a new instant order with a specific Magic Number is placed. This way H-Trader does not affect other manual orders that usually go with zero magic numbers.

**2. Lot size, Take Profit, Stop Loss:** Basic options for trading are placed within a single panel so you can control it at any time. You don't need to go to Inputs of the indicator as they are all here, at a chart. You set here Take Profit, Stop Loss values, Lot Size. In addition, you may set here Breakeven and Trailing Stop Loss if needed.

- ✓ **Take Profit:** target profit in Pips for auto TRADE/ manual orders if support
- ✓ **StopLoss:** max possible loss in Pips for auto TRADE / manual orders if support
- ✓ **Lot:** lot size for auto trade option

Smart Stop Loss/Take Profit: if you chose SMART in TP and SL, it will use previous 25 bars for important levels and calculate SL/TP based on it. Anyway, There are some limits there... Take Profit won't be more than 100, less than 20. Stop Loss will be 80 Pips max, 30 Pips min. Always, TP will be higher than Stop Loss.

**3. Options:** you can add trailing Stop Loss and BreakEven for trading. Chose BE(BreakEven) or TrailSL(Trailing Stop Loss) or both BE/TSL.

- ✓ **BE:** value of profit in Pips when you want to move Stop Loss to +1 Pips
- ✓ **T-Start:** trailing SL start point, in Pips.
- ✓ **T-Level:** distance between trailing SL and price.

*Easy to calculate: If you have T-Start 5 and T-Level 5, means that at +10 Pips profit, SL moves to +5 Pips(Start) and follow the price on +5 pips distance(T-Level). Each 1 Pips.*

**4. Magic:** H-Trader means that indicator won't manage all manual orders. It will manage just AutoTrade orders and manual orders made from the panel. But it won't manage all manual orders. If you make it ALL - this indicator will manage all manual/AutoTrade orders.

## TIPS ON MANUAL ENTERING

You may enter when you see a relevant signal. For extra safety you may also check higher TF signal and time of news releases. Do not trade at weak market.

## PROFIT TIP №1: BREAK EVEN/TRAILING SL

Activate BreakEven at 7-10 pips profit level. It helps to secure almost every order! Use Stop Loss and Take Profit that is relevant for the selected timeframe. If you manage fast orders you can reach an extremely high win/loss ratio of about 75% and up to 90%. That's why we added auto TRADE feature. Please use it for the instant auto entry!

## PROFIT TIP №2: NEWS-BE CAREFUL

Nowadays there are lots of web resources that offer news on upcoming economic events. You know how strong a news impact can be. It can ruin any order or bring a sudden luck. But we do not recommend taking such risks unless you are a devoted news-trader. It is better to skip high-impact news, so please follow economic calendar!

## Money Management

**Money Management in a single rule: Risk >>> Stop Loss >>> Lot size.**

Risk 1-3% of your deposit per trade. Decide on a risk and based on price action, set a Stop Loss. Now, calculate your Lot size volume that would match with your risk.

**For example:** your stop loss is 10 pips, and your equity is 10,000\$. You wish to risk

2% of your equity in this trade, so you enter trade with 2 lots – so your risk is 200\$, or 2%.

## PUSH UP NOTIFICATIONS

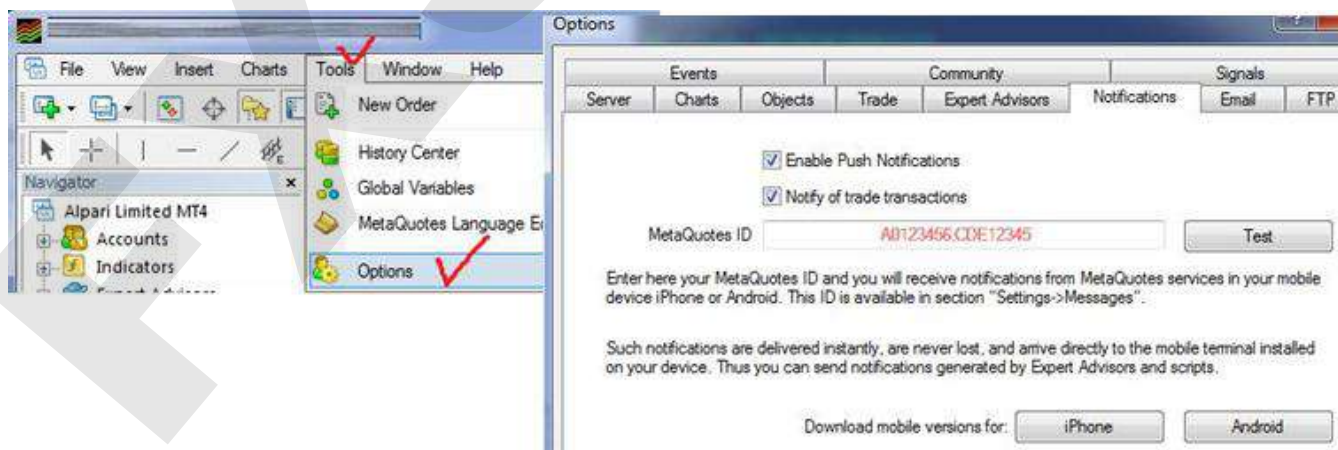

**PUSH UP NOTIFICATIONS:** on your Android & iOS device.

**#1 You should find your "MetaQuotes ID"**

Download MT4 for your mobile device and come to "Settings" and choose "Messages". You will see "MetaQuotes ID" and code. Use this unique ID with your client terminal.

**#2 Launch MT4 on your PC, click Tools – Options and past the code there.**

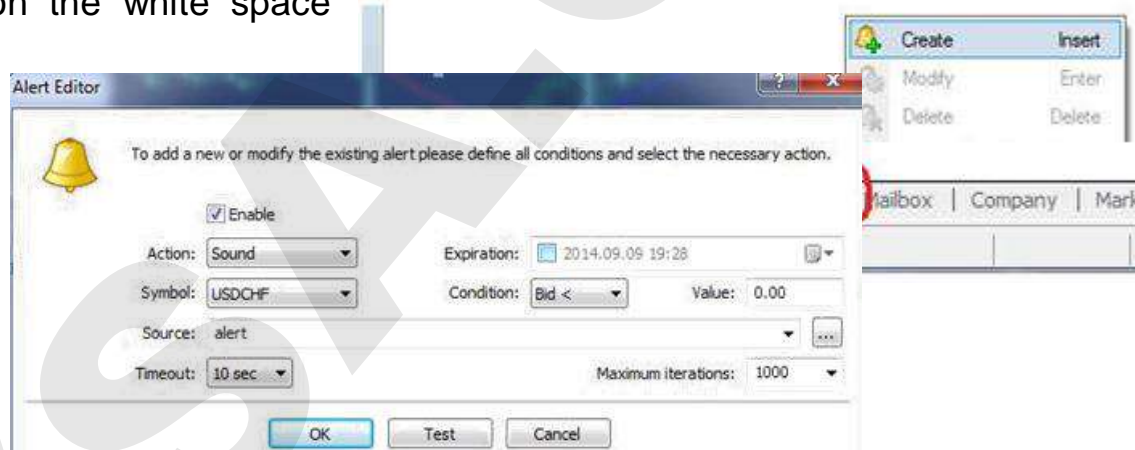

**When you inserted your "MetaQuotes ID", click Test.**

It will generate a test message to your mobile device. Please, take a look in the “Journal” to confirm the notification was sent. If set up properly, you will receive a notification in your status bar and in the “Messages” area of MT4 Mobile.

**Now, you can set up personal notifications as well:** Open Alerts tab of your MT4 terminal. Click on the white space and select **CREATE**. Now create your own notification.

## EMAIL NOTIFICATIONS:

**Click Tools – Options, select Email tab.**

Setup your SMTP local servers, email username, password to receive instant alerts with all levels and signals via email.

## Useful Trading Notes:

**Trading is a habit.** When you start trading you try different strategies, pairs, timeframes and finally end up at scalping or day-trading or news trading, just add your own style to the list. Each trader is unique but all traders should follow Forex logics otherwise they risk to lose a deposit sooner or later. Let me remind you how to form a healthy trading style.

### ✓ **Idea of trading.**

Do not trade with last money; do not put all your savings in it. **I believe that somewhat about \$200-300 is good enough for a start.** So, do not focus on trading as your daily obligation. You need good market conditions, if you miss the signal, do not go in, skip it, wait for the next signal! Don't force the market, it will not adapt to your orders...

### ✓ **Turn Force majors into advantages.**

News impact may be disastrous if you ignore economic events calendar. Check it and get ready – close or open orders depending on your needs. I would rather close... But most traders are so much deep in thoughts with stop losses and profits that they just forget about news.

### ✓ **Double stop to potential losses: Stop Loss. BreakEven.**

No matter how wonderful our system is, it is the manual system. It gives signals, but it is you who compare them with market reality, check filters and select Stop Loss, Take Profit. Security must be your primary task. **We have tried to eliminate almost all false signals,** but if you start trading before news or forget about Stop Loss, our system will be not really responsible for it. So please ALWAYS mind the safety of your deposit. Do not set high lot sizes and use all filters available. Don't place an order if you are not sure about it.

### ✓ **Pairs: more charts don't mean more money**

**It works with all major pairs.** We optimized it per each major pair and are sure that it will give great signals. But each signal needs to be accompanied by a trader: checking filters, setting up Stop Loss and so on. **Please do not rush into 5-6 charts trading;** it is a challenge even for experts with great experience. 1-2 major pairs are perfectly enough for making a steady daily gain. You may switch to the most active pair according with the active session and take one more that correlates with it.

**Feel free to ask me anything you need.  
I will be glad to help you at any time.**
