Theorem EA Analyzes the market and auto determines the entry levels based on the finding of price fluctuations in quiet periods.

The direction of the trade is determined by the EA's clever adaptive system which has a profit ratio of over %90.

The most powerful part of the EA is the Smart Auto-Close function that has been developed after many years of market experience

Theorem tracks TP/SL breakouts of the open trades and auto-closes them according to market conditions
this means that the TP/SL levels are dynamic and not static.

On top of that,
Theorem has also another security so that if everything fails,

It has the normal Stop Loss which secure your balance
