## Your Common Setings Must Look This Way Before Setting Parameteres

### Parameters Explanation

**Start Trade** : This is when trade will start...

**End Trade:** This is when trade will end...

**DbLots:** If set to 1 it means your 3<sup>rd</sup> lot size will start increasing...

But if set to 2 it means all lot sizes will be Fixed Lot.

**Lots:** That is the starting lot size.

**Sl:** That is the specific stop loss for all the trades

**TP:** That is the specific take profit of all the trades

**Cycle:** This is the next cycle when the 3rd trade will start, followed by the rest..You can also call it Gap difference between trades.

**Your Defined Maximizer:** This is like next 3<sup>rd</sup> lot size multiplier followed by other trades lot sizes.

**Magic Number:** That is the magic number for this EA.

Instead of wasting your time with which settings to use...

Just Load the preset files we sent to you...On each pair...

Just attach the set file to all the pairs we send to you on a minimum account of \$100 account ( 10,000 cent) and watch the profit coming in.

Don't be scared even if the market moves against you like 1000 pips, you are fine, the settings will take care of that.... (Slow Settings)

The fast money making machine settings is also available but please once you double your money withdraw because it can have huge drawdown..Because the more money you want to make in forex the more risk it takes..(Fast settings)
