Forex4Live Reversal 2020

To get an entry signal there are 8 indicators that work together to get an accurate signal. Entry indicator is star. To filter trends there are several indicators used.

The first indicator is located in the second window with brown lines and green lines. If the green line has crossed the brown line then there are 2 possibilities namely the trend will reverse or will continue. After the green line crosses the brown line and the green line touches level 0, this is a sign that a new trend will emerge. You need other indicators to filter trends.

The next indicator in the bottom window. If the reversal pattern appears namely when the green bar moves from -0.3 to 0.3 it means that the BUY trend will immediately appear. All you have to do is wait until the green candle appears or the green star appears then open BUY.

For the reversal pattern on the sell trend, the red bar moves from 0.3 to -0.3 past the 0 line. Then wait for the red candle to appear in the main window or the red star appears then open SELL.

How to set SL and TP?

SELL TP / SL

If you enter sell at 120.500 and resistance level at 121.000. Set SL at the resistance level which is 121.000. SL / TP is 1: 1. So TP, at 120.500 to 120.000.

BUY SL / TP

TP / SL rules are 1: 1. If the entry level distance from the support level is 100 pips, then set the TP to a maximum of 100 pips.
