USER GUIDE

WELCOME

This tutorial will explain what [TIGER X PRO](#) is, its advantages, downsides, risks and procedural considerations. To successfully complete this tutorial, you'll need to know your way around [Metatrader4](#). You need to know how to navigate through charts, install expert advisors in your trading platform and load them to charts. It also helps if you are knowledgeable in risk management: exposure, leverage and margin are terms you should be familiarized with.

The expert advisors covered in this tutorial implement a fully functional and fully featured automated trading system. Input parameters are limited and understandable. Most inputs of the EAs are drop-down menus which makes it almost impossible for the user to enter unreasonable values. Any parameter that can be auto-calculated by the EA has been removed from the inputs to avoid confusion. Others have been broken down into ratios based on others.

This expert advisor is, probably, the best trading expert advisor you can find on the internet, but also the easiest one to use. I have spent a tremendous amount of time coding the visual elements of this tool, to make sure you understand how it works and to make the EA behave as you'd expect it to, in a predictable fashion. I do hope you enjoy this tutorial and find forex trading as profitable as I do.

TIGER X PRO FEATURES

- Automated From Start To Finish.
- Opens, manages, and closes the best trades for you. No need to lift a finger.
- Artificial Intelligence Trading Strategy.
- Plots chart price in real time to find the best entry and exit points with no lag.

- Most Popular Forex Robot.
- The #1 choice of professional forex traders using expert advisors.
- Simple to Setup and Use.
- Designed for any skill level.
- Get up and running in less than 5 minutes.

TRADING SYSTEM OVERVIEW

Grid trading has become very popular amongst traders because it does not use stops, is highly mechanical, has no reliance on direction, uses the intrinsic wavy nature of the market, does not require indicators or charts to trade and can be easily automated. Grid trading refers to the trading approach which uses fixed price levels to enter and exit trades.

On the bright side, a grid trading strategy can profit from the same absolute market movement several times and can even make money if the market is moving against your grid. On the downside it can appear complex and illogical initially, it can incur large drawdowns if poorly managed, requires more patience than normal and may require forex traders to make a huge paradigm shift in their thinking.

Once a grid has been allocated, the system will cash-in profits every time the market moves the desired spacing and replace the trade as soon as possible to repeat the process. Hence, the expert advisor can cash-in the same price movement several times, capturing up to four or five times more profits than a single trade with the same exposure.

Grid trading is a highly profitable and mechanical trading strategy which has no reliance on direction, profits from volatility and uses the intrinsic wavy nature of the market. It requires no market timing or complicated analysis, but rather, the ability to forecast where the market won't go in the long term and a good understanding of equity, exposure and leverage.

INSTALLATION of TIGER X PRO

1. Download & Install MT4 Platform in your PC or VPS.
2. Download "TIGER X PRO" Zip from your email & extract it.
3. Copy "All The Folder"
4. Open MT4
5. Click **File** -> Open **Data Folder**
6. A Browser will pop up. Double Click **MQL4**
